

## Primary Care Patient Panels

Under NHI Bahamas, the number of beneficiaries enrolled with a registered Primary Care Physician will be called the NHI Primary Care Patient Panel (“Panel”). Panels will be capped at 2,000 beneficiaries per full time physician.

In order to ensure a level of continuity of care, registered physicians will be permitted to reserve spaces within their cap of 2,000 for their existing Primary Care patients.

Registered physicians will reserve spaces by completing a form made available on the NHI Bahamas website. This form will become available at a later date, following provider registration but preceding beneficiary enrolment. Registered providers will be notified when the form is available.

There will be no obligation for beneficiaries to select that provider facility and/or physician, if beneficiaries choose to select a different provider.
